Confirmed COVID-19 Cases, Metropolitan and Nonmetropolitan Counties

Fred Ullrich, BA; and Keith Mueller, PhD

Report

While much of the COVID-19 focus has been on major metropolitan areas, rural areas of the United States are not free of exposure. As of March 30, 2020, there were a total of 180,468 cases identified in counties (data provided by [USAfacts.org](http://USAFacts.org)), with 6,537 of those cases (about 3.6 percent of the total number) reported in non-metropolitan counties. But as many experts have pointed out, the rate of growth in cases is very different depending on location. Further, the stress on the health care delivery system is proportionate – a small number of cases creates stress for low capacity systems just as a large volume of cases creates stress for larger capacity systems.

Recent maps and the “progression” of cases throughout the country can be seen on the animated map on the RUPRI Health web site:
