### Confirmed COVID-19 Cases, Metropolitan and Nonmetropolitan Counties

Fred Ullrich, BA; and Keith Mueller, PhD

#### Report

While much of the COVID-19 focus has been on major metropolitan areas, rural areas of the United States are not free of exposure. As of April 15, 2020, there were a total of 628,205 cases and 27,911 deaths identified in counties (data provided by [USAFacts.org](http://USAFacts.org)), with 26,411 cases and 976 deaths (about 4.2 percent of cases and 3.5 percent of deaths) reported in non-metropolitan counties. But as many experts have pointed out, the rate of growth in cases is very different depending on location. Further, the stress on the health care delivery system is proportionate – a small number of cases creates stress for low capacity systems just as a large volume of cases creates stress for larger capacity systems.

#### Map 1. Counties with confirmed COVID-19 Cases

Recent and **updated maps**, and the “progression” of cases throughout the country, can be seen on the animated map on the RUPRI Health web site:
