Confirmed COVID-19 Cases, Metropolitan and Nonmetropolitan Counties
Fred Ullrich, BA; and Keith Mueller, PhD

Report
While much of the COVID-19 focus has been on major metropolitan areas, rural areas of the United States are not free of exposure. As of April 6, 2020, there were a total of 358,090 cases and 10,427 deaths identified in counties (data provided by USAFacts.org), with 13,591 cases and 382 deaths (about 3.8 percent of cases and 3.7 percent of deaths) reported in non-metropolitan counties. But as many experts have pointed out, the rate of growth in cases is very different depending on location. Further, the stress on the health care delivery system is proportionate – a small number of cases creates stress for low capacity systems just as a large volume of cases creates stress for larger capacity systems.

Recent and updated maps, and the “progression” of cases throughout the country, can be seen on the animated map on the RUPRI Health web site:
