**Confirmed COVID-19 Cases, Metropolitan and Nonmetropolitan Counties**
*Fred Ullrich, BA; and Keith Mueller, PhD*

**Report**
While much of the COVID-19 focus has been on major metropolitan areas, rural areas of the United States are not free of exposure. As of April 11, 2020, there were a total of 520,378 cases and 20,067 deaths identified in counties (data provided by USAFacts.org), with 21,068 cases and 683 deaths (about 4.0 percent of cases and 3.4 percent of deaths) reported in non-metropolitan counties. But as many experts have pointed out, the rate of growth in cases is very different depending on location. Further, the stress on the health care delivery system is proportionate – a small number of cases creates stress for low capacity systems just as a large volume of cases creates stress for larger capacity systems.

**Map 1. Counties with confirmed COVID-19 Cases**

Recent and updated maps, and the “progression” of cases throughout the country, can be seen on the animated map on the RUPRI Health web site: [http://ruprihealth.org/publications/policybriefs/2020/COVID History/](http://ruprihealth.org/publications/policybriefs/2020/COVID History/)
